The machines listed here are capable of printing onto tabs, according to their manufacturers. However, DocuCopy tabs have not been tested in all of them, so we cannot guarantee satisfactory tab performance in every situation. Free test samples are available to help you evaluate them in your equipment—just ask.

Many other machines not listed here can also print onto tabs, even though they may not be equipped to print tabs in sequence and automatically insert them into finished documents. This includes many low to mid-volume copiers and printers. In those situations, use uncollated single position tabs and print one tab position at a time; use the machine's bypass feed feature if necessary. Test samples are available at no charge.

Most desktop laser and inkjet printers do not have the ability to print sheets larger than 8½x11" or heavy paper, such as tabs. Free samples are available to test in your own printer. To download print templates go to www.flexfinishing.com.
